

MotorVac Fulfills Order Backlog and Builds Future Inventory

Distributors Can Continue To Sell With Confidence

The MotorVac Operations Team has worked very hard the past few weeks to ship all open orders and we cleared most of the backlog by the end of August. Since July, manufacturing has continued in high gear and parts were expedited from all suppliers to produce the maximum number of machines each day.

Throughout September, production will continue at a very rapid pace with the goal of achieving and maintaining a minimum inventory of each product.

Beginning in October, our objective is that each order will be shipped within 72 hours after it is placed and every product will be delivered to its destination in the most expedient manner.

With the assistance of UView, who is an ISO 9000 certified company, we have improved our manufacturing processes so that we will continue to build the high quality products that MotorVac is known for, but do so faster and more efficiently to ensure every customer's satisfaction.

MotorVac machines in production

MotorVac products ready for delivery

MotorVac is excited about the future since we now have the ability to focus on the road ahead and continue our plans for expansion. As the economy and industry recovers, MotorVac will be well positioned to respond and we will be prepared to help all of our customers grow their fluid maintenance service business.

As always, everyone at MotorVac is dedicated to your success and we thank you for your patience and support.
